24	11/21-11/27	Route 66 Marathon							

- Unless otherwise stated, Saturday long runs should be 60 to 90 seconds slower per mile than marathon pace.
- **FF** means fast finish. These runs will start at the usual long run pace, but the last third of the run will be run at a progressively faster pace, ending at marathon pace or maybe even quicker.
- **Pace** runs will start with a slow warm up mile, and the rest of the run will be at marathon goal pace.
- Midweek runs are usually at an easy pace, around 30 to 60 seconds per mile slower than marathon pace, unless they are tempo, speed, or hill workouts. Schedule for the type of workout is flexible, and will change based on how the runners are feeling.
- **Hill (H)** workouts either will be moderate running over a hilly course or will be hill repeats.
- **Hill Sprints (HS)** are short (10-20 second) high intensity efforts on a steep hill. We will run a few easy miles to warm up, and then do the hills, followed by an easy half-mile or so to cool down. 3+2HS means three miles warm up & cool down plus two hill sprints.
- **Tempo (T)** runs will consist of a ½ to 1 mile warm up, several miles at tempo pace, followed by ½ to 1 mile cool down. Pace should range from 10-15k race pace for shorter tempo runs to half marathon race pace or a little slower for longer tempo runs.
- **Speed (S)** work. A suggested format is to do ½ or 1-mile repeats. Pace should be between 5k and 10k race pace for mile repeats and about 5k race pace or slightly faster for half-mile repeats. Recovery time between intervals should be from ½ the interval time up to the interval time.
- Note: All paces should be adjusted for weather conditions (i.e., heat and humidity).
